**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 9, 2003 has been entered.

***REJECTIONS WITHDRAWN***

2. The 35 U.S.C. 112 rejections of claims 6, and 7 are withdrawn due to Applicants' amendment.

***NEW REJECTIONS***

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 3-5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention. Specification fails to teach the polymer and pigment derivative combination.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 1755

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

7. Claim 4 recites the limitation "water soluble polymer is adsorbed on the surface of the pigment particles" in line 2. There is insufficient antecedent basis for this limitation in claim 1.

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

9. Claims 1-3, 6, 8, and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aida (US 6,235,099).

Art Unit: 1755

As to claims 1-3, Aida teaches inkjet recording liquid (abstract) and process for the production thereof comprising a pigment derivative having a polar group (col. 5, lines 18-64) and pigment particles (col. 4, lines 1-42) ranging from 0.01 to 0.1 microns or 10-100 nm (col. 3, lines 28), and a surfactant (col. 9, line 66) dispersed in a dispersion medium (see examples). A prima facie case of obviousness typically exists when the range of a claimed composition overlap the range disclosed in the prior art. *In re Malagari*, 499 F.2d 1297, 1303, 182 USPQ 549, 553 (CCPA 1974).

As to claim 6, Aida teaches a surfactant is added for the purpose of maintaining the dispersion of the pigment (col. 9, lines 63-65). It is well known in the art that the surfactant would adsorb on the surface of the pigment particles to decrease agglomeration amongst the particles.

As to claim 8, Aida teaches water-based or water-dispersed inkjet recording liquid to contain at least 50% water (col. 9, lines 15-18; col. 11, lines 12-19, 26-36 and col. 12, lines 27-35, and 42-51).

As to claim 34, Aida teaches the inkjet recording liquid comprising a pigment derivative with a polar group (col. 5, lines 50-64).

### ***Response to Arguments***

10. Applicants' arguments and Declaration has been considered, but moot in view of new grounds of rejection.

11. Applicant argues, "Support for claim 3 is in the original claim 3".

Art Unit: 1755

**12. Applicant is reminded that there must be support for the pigment derivative having a water-soluble polymer absorbed on its surface within the Specification and not in the original claim 3, which has been amended.**
